## **Editorial**

The aim of the journal is to serve the theological community with information provided and arranged to help them better understand the new scientific discoveries and studies that may be connected by their relevance to their own field or in associated fields. On the other hand, the interested scientists may find here new insights or a more profound attempt of understanding of the results of their research work. GWS also reflect ethical, environmental and societal implications of the work performed by scientists and technologists, intending to contribute actively to international debates on these issues. The journal will also provide students and newcomers in the field of Science & Theology, a basic tool with which to learn its fundamental and possible applied aspects. The Journal welcomes submission of scholarly work of science from professionals that meet the stipulated criteria with regard to significance, value and scientific excellence. Submissions are acceptable in both Bhasa Malaysia and English. We look forward to receive your scholarly work for publication in GWS.
